THE NEW PLANET NEPTUNE.*

Up to the beginning of the present century, six planets were known to exist; viz. Mercury, Venus, the Earth, Mars, Jupiter, and Saturn, revolving round the sun in elliptic orbits, and in the order in which we have named them, Mercury being nearest to the sun, Saturn the farthest removed from it. At the close of the last century Sir William Herschel discovered another planet beyond the planet Saturn, at a distance of 1,840,000,000 of miles from the sun, and completing its revolution round that luminary in about eighty-four years. In compliment to his patron, Herschel named this planet the Georgium Sidus; but both in England and on the continent it has since been better known as Herschel, or Uranus. The respective distances of the several planets from the sun is determined by a law which admits of simple and definite expression; the area or space included between any two contiguous orbits is twice as large as the area included in the next planetary interval, proceeding inwards, and half as large as the next interval, proceeding outwards. This harmonious law, however, which so satisfactorily proves that the individual planets of our system are united together by some comprehensive relation, which has meted out their several distances, and appointed to each the orbit in which it shall roll, was not fully ascertained until the present century. Until that period, a void was conceived to exist between Mars and Jupiter; but, at the commencement of the present century, several astronomers, struck with the regularity of the respective distances, of the other planets from the sun, and from each other conceived the idea that this supposed void might contain the orbit of another planet till then unknown, and they therefore deliberately set themselves to the task of searching for it. The result was, the discovery of two new planets, Ceres and Pallas, to which Juno and Vesta were soon afterwards added. These four minute planets move in orbits nearly coinciding each with the other, and all pass through one common point of space at one point of their revolutions. Their discs appear to be not circular but angular; and it is conceived, that, at some distant period, they constituted one large sphere, which was broken up by internal violence into the fragments now circling in orbits of

* Extracted chiefly from the *Westminster Review*.

their own, and all returning, from time to time, to the same position in space which was occupied by the four at the moment of disunion. When the first two were discovered, Sir William Herschel, who gave them the name of asteroids, from their resemblance both to planets and comets, predicted that many others would be discovered; a prediction soon after verified by the discovery of Juno and Vesta, and more recently by that of Astræa. This small planet, which, if the supposition above alluded to be true, must also have formed, with the four other asteroids one large planet, was discovered at the latter end of last year by Herr Hencke, of Berling and has since been noticed at the chief observatories of Europe. Since then another also has been discovered.

But the interest of the discovery of obscure asteroids sinks into insignificance when compared with that which has so recently been made known to the world. We allude to the body which commonly goes by the name of Le Verrier's planet, and which is one of the largest of our system. This discovery or itself is an event of no inconsiderable consequence; but it assumes a new interest, when it is remembered that it was not the result of chance or of a fortunate supposition, nor was it even effected by the increased power of our telescopes, but was the consequence of the unaided power of profound thought, and of abstract mathematical reasoning. There has not, in the whole history of science, occurred any more striking event than this. In general, it will be seen from what we have before said, observations have preceded science, and theories have been the result of previously known facts; but, in this instance, science has only had to follow the steps of theory, and to look at the exact point indicated for the unknown planet which theory had alone as yet seen.

Until the present year, then, as we have already observed, Uranus was supposed to be the last and farthest planet of our solar system; and its immense distance from the sun, a distance amounting to 1,810,000,000 of miles, gave rise to the supposition that either it was, indeed, the most remote orb of our system, or, that, if there were others still further removed, they could never be detected.

Such conceptions as these in which a line is marked out beyond which intellect is supposed to be unable to pass, have indeed, been common in almost all of the physical sciences, but, one after another, these artificial barriers have been thrown

down; and, in virtue of the prerogatives given it by God, inquiry has, as in the instance before us, disowned the restraint and burst all bonds. For outside that which seemed to be the extreme verge of our system, it is now clearly proved that a mighty planet, exceeding Uranus in size, has been rolling in orbits of 217 years, unknown in its outer darkness until its blind but strong influence on the motions of Uranus have at length betrayed its presence.

The irregularities of the orbit of Uranus having been for a long period a difficulty to astronomers, induced M. Le Verrier to a more close examination of that planet's motions; and he found that of the whole amount of irregularity in its path, or of its *perturbations*, only a comparatively small part could be accounted for by the attraction of any known forces. Upon examining, too, tables which had been constructed of the orbit of Uranus, he found that they in no way agreed with the latest observations. These discrepancies he conceived might be either due to want of precision in theory, or want of exactness in observations; or Uranus might be subject to other attractions than those of the sun, Jupiter, and Saturn; and he resolved to endeavour to determine the cause of these perturbations. Finding so much inaccuracy in the data and calculations on which the previous tables of the planet's orbit were founded he set himself to the laborious task of investigating and calculating everything a fresh, with the utmost rigour, and, after much perseverance, he determined with great nicety the amount of perturbation in the orbit of Uranus due to the attraction of Jupiter and Saturn. With these corrected data before him, he proceeded to compare the *Calculated* path of the planet with its actually observed positions; and he came to the conclusion, not merely that there was difficulty and discrepancy in the comparison, but that, on grounds of the strictest geometrical reasoning, none of those known forces were adequate to, produce the observed irregularities of the planet's course. Several ways had been already suggested of getting rid of the difficulty—the resistance of the earth—a vast satellite of Uranus—some variation in the law of gravity at that enormous distance from the sun, the shock of a comet, or, lastly, an unknown planet. But M. Le Verrier showed that all these suppositions, except the last, were inadmissible, and that, if the disturbing force proceeded from an unknown planet, the stranger must be, not within the orbit of Uranus, because, if a large body, it would

disturb Saturn's orbit; if a small one, it would not be adequate to produce the actual amount of disturbance in that of Uranus; nor, for the same reasons, *near* on the outside of the orbit of Uranus; but far enough *without* the orbit of Uranus to act upon it, without acting upon that of Saturn, and large enough to act upon Uranus for long and continuous periods of time. According to Bode's law of planetary distances which we have already enunciated, namely, that the planets double on one another in their distances from the sun as they are more remote in the system, this new planet ought to be *twice* as far from the sun as Uranus. And this probability becomes almost a certainty; for, as its distance cannot be much less, so it cannot be greater; *e. g.* *treble* the distance of Uranus, because, as in that case it must be of enormous mass, it must act upon Saturn as well as Uranus, and its great distance from both planets would make its influence on each *comparable*; whereas, there is no trace of any such influence on the orbit of Saturn. Further, such a body, acting on the orbit of Uranus, must be, without doubt, in much the same plane as that planet; *i. e.* must be looked for nearly in the ecliptic.

The paper, of which we have made this abstract, was read before the Academy of Sciences on the 1st of June 1846 and in a second paper Le Verrier proceeded to fix still more exactly the place, size, and distance of the yet unseen planet. His idea was, that it was a body many times the size of the earth, and not much less than Saturn, taking more than two centuries to revolve about the sun, at a distance thirty-three times greater than the earth. Within one month after M. Le Verrier had thus minutely fixed, beforehand, the place of this mysterious body, it was actually seen. On the 23d of September, Dr. Galle, of the observatory at Berlin, received a letter from Le Verrier, urging him to look out sharply for the new star, which possibly might be recognized by its disc. That very evening, Galle, on comparing Bremiker's excellent map with the heavens, observed, near the place fixed by Le Verrier, a star not marked by Bremiker. It was compared three times that night with a known fixed star, and a planetary motion was suspected; the following night it was again observed, and its motion was confirmed, and agreed perfectly with its discoverer's announcement; and a third night September 25th Galle observed it five minutes, and Encke ten, and the place of the planet had again changed, and, as Encke observed "the place of

the planet agrees *within one degree*." This slight difference between the calculation as to the position of the new planet by the theory of Le Verrier and the actual observations by Galle and Lincke, is perhaps the most striking fact connected with the discovery. In a note by M. Le Verrier to the Academy, on this point, he observes: --

"My error in calculation will be found exceedingly small, when the slight nature of the perturbations, upon which I determined the position of the planet, is taken into consideration. This success must inspire a hope, that after thirty or forty years' observations of the new planet, astronomers may use it in its turn as a means of discovering the next that follows in the order of distance from the sun. They will, unfortunately, soon arrive at stars invisible on account of their immense distance from the sun, but whose orbits may be correctly ascertained by theory.

Since this discovery, the planet has been frequently observed, both in our own country and in many parts of the continent. Its present distance, expressed in common measure, is about 3,200,000,000 English miles from the sun, and about 3,100,000,000 from the earth. Its distance from Uranus, whose motions it disturbs, is about 140,000,000, of miles. Its diameter is estimated at 50,000 miles, that of Uranus being 35,000, of Jupiter 86,000, of Saturn 79,000, of the earth 8,000, while the diameters of the other planets are less than that of the earth. Thus, with the exception of Jupiter, and Saturn, the new planet is the largest in our system. Its cubic bulk is to that of the earth as 250 to 1. Considering that Jupiter, Saturn, and Uranus are each attended by a train of satellites, it appears extremely probable that the new planet will have a similar accompaniment. Indeed, a subsequent observer, Mr. Lassell, of Liverpool, has stated his belief that he has discovered not only one accompanying satellite, but also the existence of a ring round the planet. "With respect to the existence of a ring," observes Mr. Lassell,* "I am not able absolutely to declare it, but I received so many impressions of it, always the same form and direction, and with all the different magnifying powers, that I feel a very strong persuasion that nothing but a finer state of atmosphere is necessary to enable me to verify the discovery. Of the existence of the star, having every proof of a satellite there is not the shadow of a doubt." These

maters, however exact, be determined until the observations of the planet have been continued for a longer period.

But, although the merit of this discovery is unquestionable due to the French philosopher, still it is gratifying to know that an English astronomer was following close at his wake, nay, that the planet had actually been observed in this country a month earlier, but its announcement was postponed from a desire to make more complete and accurate observations with regard to it. At the last meeting of the British Association, on the occasion of resigning the chair to Sir R. Murchison, Sir J. Herschel stated, that among the remarkable astronomical events of the past twelve months, it had added a new planet "to our list, adding these remarkable words, "It has done more, it has given us the probable prospect of the discovery of another. We see it as Columbus saw America from the shores of Spain. Its movements have been felt, trembling along the far reaching line of an analysis, with a certainty hardly inferior to that of ocular demonstration." Now, the confidence with which this assertion was made, depended, first upon a statement of the late illustrious astronomer Bessel made to Sir John in July, 1842, that the motions of Uranus could not be accounted for by the perturbations of the known planets, and that it was highly probable that the deviations in question might be due to the action of an unknown planet; secondly, from the remarkable calculations of M. Le Verrier, corroborated by Sir John's knowledge that a similar investigation had been independently entered into, and a conclusion as to the situation of the planet, very nearly coincident with M. Le Verrier's, arrived at (in entire ignorance of his conclusions by a young Cambridge mathematician, Mr. Adams. Professor Challis has since published † a statement of the steps of which Mr. Adams was led, by his spontaneous and independent researches, to the conclusion that a planet must exist more distant than Uranus. As we conceive this matter to be one of great historical moment, and as it has been the cause of much expression of bad feeling from the journalists across the channel, we need make no apology for briefly stating the real facts, which we abridge from the statement of Professor Challis.

Mr. Adams had long formed the resolution of trying, by calculation, to account for the anomalies in the motion of Ura-

thus on the hypothesis of a more distant planet, but it was not until the year 1843, that he had time for pursuing the subject. In September 1845, Mr. Adams communicated to Professor Challis as also to the Astronomer Royal, calculations which he had made with regard to the assumed exterior planet, deduced entirely from unaccounted for perturbations of Uranus. M. Le Verrier's first paper, as we have already said, was published in June 1846, and the assumed position of the planet was very nearly the same as that assigned by Mr. Adams. This coincidence as to position, from two entirely independent investigations, naturally inspired confidence, and the Astronomer Royal suggested a rigorous search after the hypothetical planet; a task which was undertaken by Professor Challis, who commenced his observations on the 29th of July. On the 4th of August, he recorded a place of the planet; and on the 12th of August, he again observed a star of the eighth magnitude in a position of the heavens which he had examined without observing it on the 30th of July. Of course this was the planet; the place of which was thus recorded a second time, in four days of observing.

"A comparison" adds Mr. Challis, "of the observations of July 30th and August 12th, would, according to the principal of search which I employed, have shown me the planet. I did not make the comparison till after the detection of it at Berlin, partly, because I had an impression that a much more extensive search was required to give any probability of discovery, and partly from the press of other occupation. The planet, however, was secured, and two positions of it recorded six weeks earlier here than in any other observatory, and in a systematic search expressly undertaken for that purpose."

To this testimony we may add, also, that of the Astronomer Royal, who corroborates in every particular the account above given.

ECLIPSES.

There will be four Eclipses of the Sun and two of the Moon.
Of the Solar eclipses the first on the 5th of March will be visible only in British North America, Greenland and Iceland. The second on the 4th of April and the third on the 29th of August will be visible only on the Southern Ocean; and the fourth on the 27th September will be visible only in the north of Europe and Asia.

Of the Eclipses of the Moon, the 1st on the 13th of September where it is night will be visible on the opposite side of the world from this, the second will be visible here as follows:
First contact with the Penumbra March 19th at 11h. 25m. P.M.
Middle of the Eclipse March 20th..... 2—31—A.M.
Last contact with the Penumbra..... 5—37—

TRANSIT OF MERCURY.

There will be a transit of Mercury over the Sun's disc on the 9th November. Its ingress will be visible in Ceylon at 4h. 21m. p. m. Colombo time. Its egress takes place after sun-set.

COLOMBO TIME.

Ceylon being so far towards the East or Sun-rising, it is already mid-day here when it is morning in England. The day here is farther advanced than at Greenwich 5 hours 19 minutes and 19 seconds, which must therefore be added to the time in England to give the time here.

THE WEATHER.

COLOMBO—The dry earth now receives far more heat from the sun than it parts with by evaporation or terrestrial radiation. The weather is becoming very warm. The calmness of the ocean however and the alternate sea breezes by day and land winds by night give a pleasing variety. But the heat is oppressive compared with that of the rest of the Year. Therm: Max. 85 Min. 78 Mean 81.6.

TRINCOMALIE—Fine weather throughout, wind more moderate and veers round to E. N. E. and East with morning land wind. Towards the end of the month the weather becomes warm. Therm: Max. 86 Min. 72 Mean. 81.

THE WEATHER.

COLOMBO—The Rains from the N. E. of the preceding month often continue during this, usually with much thunder and lightning and with alternate sea breezes and land winds so that the new year usually sets in with the soil saturated with moisture and colder than at any other time, from the enjoyment of which however the long-shore wind now set in and blowing fresh detracts not a little. Therm: Max. 83 Min. 79 Mean. 80.5.

TRINCOMALIE—Heavy rain with strong winds and squalls from N. E. much lightning and thunder until towards the end of the month, when the Weather clears up and is very pleasant. Therm: Max. 82 Min. 72 Mean 78.

VARIATIONS OF TEMPERATURE CORRESPONDING TO ALTITUDE.

As we ascend, the air becomes thin or rare, and as it becomes rare it also grows cold. No fact is better established than this, though, the rate of this cooling of the air as we ascend in it does not appear to be uniform, but to vary in different countries and even in the same country at different seasons. Were we to go by local data we might calculate it thus. The mean annual temperature of Colombo is probably about $80^{\circ} 5$; that of Kandy at 1682 ft: above the sea is about $74^{\circ} 5$; and that of Nuwera-Ellia at an elevation of 6210 ft: is about 55° ; giving a fall of one degree for every 290 ft. in the former case, and for every 295^o in the latter results which accord very well with observations made elsewhere. and particularly with those which may be deduced from the other sanatoria of India.

ELEVATION above the Level of the Sea of the following Stations in the Island of Ceylon, determined from simultaneous Observations with the Mountain Barometer.

PORT OF COLOMBO.

THE Port of Colombo extends from that of Caltura on the one hand to that of Negombo on the other, but it is only to the outer and the inner harbour at Colombo itself that shipping resort at present. The harbours are separated by a bar formed by the River Calany which lies across the Bay and has only about 12 feet of water over it.

The outer harbour is a safe anchorage at all seasons. But from the middle of May till the middle of July when the S. W. monsoon is most violent and again from the first December till the end of January when the long shore-wind prevails transport of goods between the shipping and the shore is sometimes liable to be interrupted for several days at a time. The most suitable season for delivering and taking in cargo is from the first of February till the end of April, which is happily also the season when the greatest quantity of Coffee arrives from the interior. The inner harbour is chiefly the resort of native craft and small country brigs, the former from October till April only, the latter all the year. It is safe all the year round although during the long shore-wind care must be taken to prevent getting foul or ashore.

THE HARBOUR OF TRINCOMALIE.

TRINCOMALIE, situated on the east side of the Island of Ceylon, contains a most spacious safe harbour, and with its small bays and coves is perhaps superior to any in India. Every part of the harbour is land-locked, the anchorage good for any number of Ships and of any burthen.

Back Bay from the 1st of April to the 25th October is also an excellent anchorage with from 10 to 5 fathoms water good holding ground, sea quite smooth, so that the smallest boats may land. Fort Frederick forms the S. E. point of the bay, the Flag staff there is in latitude $8^{\circ} 30' 36''$ N. and long $81^{\circ} 14' 52''$ E., a good light which can be seen 15 miles off is exhibited at the Flag-staff every night soon after sun-set, it is 246 feet above the level of the sea, and serves to guide Ships by night clear of the rocks off Pigeon Island to the north and the shoals off Foul Point to the S. E., as well as to lead them to an anchorage in Back Bay. Piers for the inner harbour are necessary, as there are dangerous shoals outside and inside; but Back Bay is quite safe. Vessels may lie within 1-3d of a mile from the Custom House in 5 fathoms water. The Custom House is opened for business on the 1st of April and continues until the 25th of October when all is changed to the Custom House in the inner harbour.

A new Light was exhibited at Flag-staff Point Trincomalie on the night of the 1st of October 1845 and is continued every night from sun set until day-light.

The Lantern having a fixed light with two powerful reflectors, when hoisted, is 266 feet above the level of the sea. The Light can be seen 15 miles off from any bearing between Pigeon Island and Foul Point comprehending an angle of 140 degrees.

The following remarks are published for general information:—

Latitude of the Light.....	$8^{\circ} 35' 38''$ N
Longitude from Madras Flag staff.....	0 58 22 E
Longitude from Greenwich.....	81 14 52 E
Variation of the Compass.....	0 59 37 E

Foul Point bears from the Light S. 55° E. distant $5\frac{1}{2}$ miles, and the extreme of the reef off that point S. 60° E. nearly 5 miles.

Ships coming from the S. E. with a fair wind at night and having made the Light should on no account in passing Foul Point bring the Light to bear to the northward of W. N. W., that bearing will take a Ship more than half a mile to the northward of the reef and in not less than 14 fathoms water. If it is intended to anchor in Back Bay (which Ships may safely do between the middle of March and 25th October) and having brought the Light to bear W. N. W. they may steer directly for it rounding Flag-staff point close (the point being steep too) and anchor in 10 fathoms water with the Light bearing about S. b E.; small Vessels may anchor in 6 or 7 fathoms water with the Light bearing S. E. b E.

From the Light the outside visible Rock off Pigeon Island distant about 9 miles is in a direct line with Elizabeth point bearing N. 15° W. Ships coming from the northward and wishing to anchor

in Back Bay should be cautious not to bring the Light to bear to the eastward of south, that bearing will lead 2 miles to the eastward of Pigeon Island and nearly a mile to the eastward of the Lively Rocks. These Rocks lie half a mile to the eastward of Elizabeth point having 4 fathoms water close too. When quite sure of being to the southward of the Lively Rocks Ships may bring the Light to bear S. b E. and anchor in Back Bay as before directed.

After the 25th October the anchorage in Back Bay is not safe until the middle of March as there is frequently towards the end of October before the N. E. monsoon sets in a heavy swell with variable winds. Ships should not attempt the Inner Harbour during the night except under most favorable circumstances, such as good moon light and having a person on board possessing local knowledge of the Harbour and the entrance to it. In such a case and being abreast of Flag-staff point the Light kept N. N. W. $\frac{1}{2}$ W. will lead clear of Chapel Rocks. The extreme Rock which is under water bears from the Light S. 18° E. distant 2 miles.

JOSEPH HIGGS, *Master Attendant.*

CARGO BOAT AND WHARF IMPROVEMENT COMPANY.

Capital £4,000 in 200 Shares.

With leave to increase it to £10,000.

Deposit £5 per Share, the remainder to be called up as required.

Trustees—Geo. Ackland, Esq.,—Geo. Crabbe, Esq.

Auditors—Robert Dawson, Esq.—John O'Halloran, Esq.

The Company is formed for the purpose of procuring and keeping up a fleet of good and substantial Cargo Boats for the shipment and discharge of cargo and similar purposes; it is intended to maintain an efficient establishment at the Wharf and a Superintendent to whose care will be entrusted the cargo for shipment and whose duty will extend to the care of all goods landed until properly housed and who will give notice to the parties concerned of all damages or defects detected on landing; thus relieving the merchant of a very considerable expense and trouble, besides ensuring the safe custody and proper care of every article of merchandize.

The arrangements will also facilitate and expedite the discharge and loading of Ships.

It will also be in the province of the Company (if the Directors hereafter consider it advisable) to procure a supply of anchors and cables to be kept for the use of Vessels in distress and to render them assistance by boats, charging a sufficiently remunerative sum; and it will be also in the province of the Company to promote and effect such improvements in and at the Wharf, as may appear desirable and advantageous.

Boats are being built of the best construction for the purpose and Captain Moyle has been appointed manager.

BAGGAGE.

First-class Passengers are allowed 3 cwt. of personal baggage free of Freight, and Children and Servants $1\frac{1}{2}$ cwt. each. and Passengers will please take note, that the Company cannot engage to take any excess of Baggage over that quantity, unless shipped at Southampton three days before starting, and Freight paid thereon.

The charge for conveyance of extra Baggage, should there be room in the Vessel, will be £2 per cwt. between Suez and India and £1 per cwt. between England and Alexandria.

Passengers will have to pay the Egyptian Transit Company in Egypt 16s. per cwt. for conveyance of Baggage through, should it exceed, for First-class Passengers, 2 cwt. and Children and Servants 1 cwt. No package of Baggage should exceed 80lbs. weight. The best dimensions for a Trunk or Portmanteau are, length, 2 ft. 3 in.—breadth, 1 ft. 2 in.—depth, 1 ft. 2 in.

Every package of Baggage should have the owner's name and place of destination distinctly painted upon it in white letters.

The Company do not hold themselves liable for any damage or loss of Baggage, nor for delays arising from accident, or from extraordinary or unavoidable circumstances; or from circumstances connected with the employment of the vessels in Her Majesty's Mail service.

PARCELS.

Parcels under one quarter of a cubic foot measurement will be taken at five shillings, six and six-pence, and nine shillings each; at and above that measurement at the following graduated scale, including all charges to the Port of Delivery, except Transit Duty on Packages exceeding £5 in value.

Note.—Five Shillings will carry six Month'y Magazines.

And for every additional cubic measurement, one shilling and eight-pence per inch will be charged to Aden, Ceylon, Madras, Calcutta, Penang, Malacca, Singapore, and China, and two Shillings and four-pence to Bombay.

If the Package weighs more than 20lbs. to the cubic foot, an additional One Shilling per lb. will be charged for the additional weight.

MERCHANDIZE

At the same rate, unless taken by special agreement.

For the above rate of freight the Company undertake to receive packages at their offices in London or Southampton, and to ship and forward them by each Steamer to the Ports of destination free of any other charge, subject to the following conditions.

Parcels for Aden, Ceylon, Madras, Calcutta, Singapore, China, and Bombay, must be delivered not later than noon, on the 15th of each month.

Ditto Bombay, (second opportunity) must be delivered not later than noon, on the last day of each month.

Periodicals for each Presidency received to the 1st of each month:—Charge 1s. each.

Parcels for Aden, Ceylon, Madras, Calcutta, and China, not to exceed 100lbs. weight, or 5 cubic feet measurement.

Parcels for Bombay not to exceed 40lbs. weight, or 3 cubic feet measurement.

Packages exceeding one cubic foot must be in wood as well as tin.

Specie, Jewellery, Silver, and Watches charged at three per cent on their value.

TRANSIT DUTY.—Ten Shillings per cent (payable to the Egyptian Government) on every article above £5 will be added to the rates.

CONTENTS AND VALUE.—Must be marked on each case: example —“*Regimentals* £10.” “*Millinery* £10.”

RECEIPT.—Receipts will be given on delivery of each parcel, with particulars of risk, and all charges will be specified in the receipt.

DELIVERY IN INDIA AND CHINA.—Parcels must be applied for to the Company's Agents in India or China, unless 5½ per cent, on the value be paid *here*; in that case the Agent will pay the duty, and immediately forward the parcel to its ultimate destination, advising the party to whom it is addressed, that he has done so.

The adoption of this plan expedites the delivery abroad very much for parcels or cases addressed to Agents at the Presidency, are often left in the Warehouse till they receive instructions from the Consignee.

OVERLAND ROUTE VIA TRIESTE.

VESSELS have been built expressly for this line, and will leave Alexandria alternately, on the arrivals there of the Bombay and Calcutta Mails and Passengers—i. e. twice a month. They will make the passage to Trieste in about 5 to 6 days, touching at Corfu—perhaps at Ancona.

Quarantine.—This irksome formality has again been modified at Trieste, and Passengers by the Lloyd's Steam Navigation Company's Steamers need not go into the Lazaretto, but may at less trouble and expense wait on board the expiry of the Quarantine, which, with clean Bills of Health, takes place on the morning of the tenth day from Alexandria, that of departure included.

The requisite quarantine examination of luggage is performed on board during the passage, but this inspection may be avoided by having the effects packed in tin or wooden cases, or in tarred canvas, and sealed in India with the Agent's seal, so as to satisfy the Health Department that no package has been opened during transit through Egypt. Such packages must, however, be accompanied by their declaration of their contents.

Two* cwt. of personal baggage will be allowed each 1st class passenger, but any excess will be subject to a charge of florins 5 (about 10s. 6d.) per cwt.

Passengers having more luggage than it may be convenient to drag with them over the Continent, may have it sent to England from Trieste by sailing vessels at a trifling freight, or overland in "Transit," in a number of days, at the rate of about 30s. shillings per cwt.; but in the latter case it is necessary that the packages be accompanied by declarations of their contents.

Routes from Trieste towards England.—A long list of Itineraries might be given, each comprising great variety, with numerous objects of interest to the curious. In the present notice it will be sufficient to mention six or seven, with the total amount of First Class fares appertaining to each, all the way to London, viz.

	£	s.	d.
By Inspruk, the Tyrol, the Rhine, Ostend, about.....	8	5	0
„ Venice, Milan, Switzerland, &c. do.....	8	13	0
„ Vienna, Nuremberg, Frankfort; do.....	13	5	0
„ Do. Prague, Dresden, Hanover, Hamburg.....	11	13	0
„ Vienna, Olmutz, Breslaw, Berlin, Hamburg.....	10	18	6
„ Laibach, Salzburg, Munich and Ostend.....	10	10	0
„ Venice, Milan, Lyons, Paris and Calais.....	14	10	0

By these routes one may reach London comfortably in 8 to 12 days, sleeping 3 or 4 nights in the road, for £13 to £18, including a moderate over-weight of luggage, and personal expenses, which, however, depend of course on the traveller himself.

Passengers wishing to reach the North of Great Britain may perhaps find it most convenient and least expensive to go by Berlin and Hambro, and thence embark for Hull or Leith; for, with the exception of the 18 to 20 hours travel by Mail from Trieste to Cilli, (which will ere long be again reduced 5 to 6 hours when

the continuation to Laibach is finished) the entire distance is to be done by Steam Vessel and Railroad.

The foregoing calculations are based on the latest information regarding the state of public conveyance on the Continent of Europe, but as the extension of Railroad communication is steadily progressing, they must be considered as subject to constant corrections in favor of the traveler.

Merchandise will be admitted to free pratique at Trieste, if treated in the same manner as stated above with regard to sealed baggage—a very important concession in favor of Shawls and similar articles. The Company insure against the usual sea risks property shipped on board their Steamers, at moderate premiums: for instance—

Alexandria to Trieste. $\frac{1}{2}$ per cent.

Constantinople, *Ditto*.

And to every other port visited by their Steamers, at proportionate premiums.

Letters posted in India, if Prepaid to Alexandria, and marked outside 'via Trieste' are forwarded by the Austrian Steamers without delay.

The *Fares* by the direct line will probably be regulated according to the system adopted by the Company on their Syra, Levant, and other lines, namely, a certain rate for passage, and Fl. $2\frac{1}{2}$, or about 5s. 3d. per day, for maintenance, altogether not to exceed £18, calculating victualling for 10 days. Cabin furniture, bedding, &c. are provided in the Steamers.

For further information, application may be made to Messrs. WILSON, RITCHIE & Co. Colombo, through whom also passages may be secured on payment of half the passage-money.

REGIES for the engagement of Passages and Freight in the Ceylon Government Steam Packet "Seaforth," employed from September to May conveying the Overland Mails between Colombo and Bombay, calling at Cannanore.

4.—The passage money to or from the Malabar Coast is two-thirds of the above rates. But preference will be given to passengers going the whole distance, unless full rates of passage money are paid for the intermediate port.

5. Passengers embarking on the Malabar Coast, are to pay their passage money in advance to the Commander in new silver rupees at the rate of two shillings each.

6.—No deck passenger will be taken, unless all the cabins are engaged.

7.—No transfer of accommodation by any person who has engaged a passage, to one who has not taken a passage, will be permitted.

8.—Persons not proceeding in the Steamer after having engaged their passage, are to forfeit one-half of the amount of passage money.

9.—The baggage of each passenger must not exceed in measurement twenty-five cubic feet, exclusive of bedding. A proportionate quantity of baggage will be allowed for children.

10.—All passengers who are not unwell, are expected to take their meals at the public table. The breakfast hour will be half-past eight; dinner hour, three; tea, sunset; with a sandwich at five P.M.

11.—Passengers living on board after the day of arrival, are to pay one pound per day.

12.—It is to be understood, that all passengers when they enter their passages, subscribe to these regulations, and pledge themselves not to carry any letters with them on board the Packet, either on their persons or in their baggage, except open letters of introduction of credit, unless they have paid the usual postage at the Post Office, and the letter bear the Post Office stamp accordingly.

Bullion, money and jewels at $\frac{1}{2}$ per cent on their value.

In the event of horses being received on board, which will only be when convenient and sufficient food is sent with them for the voyage, the charge for their conveyance on deck is to be seven pence each.

14.—All parcels or packages must be distinctly marked or addressed and must be taken to the Custom-house that the usual entry may be made, and the duty paid; and that letters contained in them may be taken out and sent to the General Post-office.

15.—All parcels or packages must be sent on board before noon on the day of the departure of the Steamer; and all parcels and packages must be taken ashore within 24 hours after the arrival of the Steamer, or they will be landed and left in the Custom-house at the risk and expense of their owner.

16.—All freight is to be paid in advance.

HIS EXCELLENCY THE RIGHT HONBLE THE GOVERNOR has directed the following Extract from Her Majesty's Instructions to be published for general information.

By His Excellency's Command,

Col. Secretary.

Colonial Secretary's Office,
Colombo, 10th June 1817.

Forty-first.—And whereas We have by Our said Commission appointing you Our Governor and Commander in Chief as aforesaid, given to you full power and authority in Our name and on Our behalf, but subject nevertheless to such provisions as are in that respect contained in your General Instructions to make and execute in Our name and under the Public Seal of Our said Island Grants of Waste Land to Us belonging within the same to private persons, and for the Public uses of Our subjects there resident, Now We do hereby require and authorize you from time to time as occasion may require to cause all necessary Surveys to be made of the vacant or Waste Lands to Us belonging in Our said Island, and to cause the persons making such Surveys to report to you what particular Lands it may be proper to reserve for Public Roads or other internal communications by Land or Water, or as the Sites of Towns, Villages, Churches, School Houses or Parsonage Houses, or as places for the burial of the dead, or as places for the future extension of any existing Towns or Villages, or as places fit to be set apart for the recreation or amusement of the Inhabitants of any Town or Village, or for promoting the health of such Inhabitants, or as the Sites of Quays or Landing Places or Towing Paths, which it may at any future time be expedient to erect, form, or establish on the Sea Coast, or in the neighbourhood of Navigable Streams, or as places which it may be desirable to reserve for any other purpose of Public convenience, utility health or enjoyment, and you are specially to require persons making such Surveys to specify in their Reports, and to distinguish in the Charts or Maps to be thereunto annexed such Tracts, Pieces or Parcels of Land within Our said Island as may appear to them best adapted to answer and promote the several purposes before mentioned. And it is Our Will, and We do strictly enjoin and require you that you do not under any pretence whatsoever grant, convey, or demise to any person or persons any of the Lands which may be specified as fit to be reserved as aforesaid, nor permit or suffer any such Lands to be occupied by any private persons for any private purpose.

Forty-second.—And We do further charge and require you not to make any Grant of Land to, or in trust for, or for the use of any private person unless in consideration of payment in money for the same after such Land shall have been previously put up for sale by Public Auction at such an upset price per acre as shall from time to time by Our authority be fixed for the same, and for this purpose you shall cause such Lands as from time to time shall remain unoccupied and ungranted to be put up for sale by Public Auction from time to time as you shall judge proper and the highest bidding which shall at such Public Auction be made for any such Lands shall be accepted, provided that such bidding shall at least amount to

such upset price per acre as aforesaid. Provided nevertheless, that no such bidding shall be finally accepted until the person or persons making the same shall have actually paid a Deposit of Ten per cent on the amount thereof, and shall have signed a Contract for the payment of the balance within one calendar month next thereafter. And it is Our Pleasure that all Grants of Land to be made by you in Our name to any person or persons in consideration of the payment of money for the same shall be made to such person or persons, and to his, her or their Heirs and Assigns to be by him, her or them held in fee and common soccage, yielding and paying to us, Our Heirs and Successors a Quit Rent of one Pepper Corn by the year for the same, and every such Grant shall pass in Our name under the Public Seal of Our said Island of Ceylon, and shall be executed and delivered to the purchaser or purchasers at the office of the Surveyor General of Our said Island on the payment of the purchase money for the same, and not before and then and not before the purchaser or purchasers shall be let in possession of the Land so bought by them and for the delivery of every such Grant, and the preparing the same, the said purchaser or purchasers shall pay into the Colonial Treasury a fee amounting to forty shillings sterling money and no more or of such smaller amount as you from time to time with the advice of the Executive Council of Our said Island shall appoint, and every such Grant shall previously to its being so delivered be enrolled in the Court of the District where such Land may be situate, and for making every such Enrolment the Registrar of such Court shall be entitled to receive from such Grantee or Grantees a fee of five Shillings Sterling money and no more,

MINUTE

BY THE GOVERNOR.

HIS EXCELLENCY THE GOVERNOR is pleased to direct that the Government Advertisement of the 13th April 1839, the Notice of the 29th May 1841, the Minute of 3d August 1841 and the Minute of the 29th June 1844 be cancelled, and that in lieu thereof the following Rules be observed in respect to the Survey and Sale of Crown Lands.

- 1.—All Crown Land will be Sold by Auction, and no Waste Land will be exposed for Sale at a price below Twenty Shillings per acre,
- 2.—The Government Agents, in conjunction with the Principal Officer in charge of the Survey Department, will make arrangements for bringing forward for Sale, from time to time, such portions of Waste Land as they may consider expedient.
- 3.—The preceding Rule shall not be held to preclude parties desirous of purchasing any particular tracts of Land, from applying to the Government Agent for the Sale of them accordingly. But the Government Agent will exercise his own discretion in respect to complying with any such application—and the applicant will not be at liberty to enter upon the Land for any purpose without his permission. It will also be distinctly understood that the making such ap-

plication will give the applicant no claim whatever to the Land, if put up to Sale, in preference to any other person.

4.—The boundaries of all Crown Land will be cleared by Officers employed by the Principal Officer in charge of the Survey Department—and the expenses attending the same will be recovered as hereafter mentioned.

5.—The following Fees will be recovered by Government for Surveys executed under the directions of the Principal Officer in charge of the Survey Department.

In cases where one or more contiguous lots are surveyed the purchaser will be required to pay the *Fees for Surveying* in proportion only to the extent of boundary actually measured, but the *Fees for preparation of Plans, &c.* will be payable in full.

6.—For Surveys of Roads, Rivers, Canals, &c. and appraisements special terms will be made.

7.—Parties making application for the Sale of any Land under the 3d Rule herof. will be required to make a deposit, to the satisfaction of the Government Agent, of the probable cost of boundary clearing and the Fees for Survey.

8.—The Surveys when completed will be lodged in the Office of the principal Officer in charge of the Survey Department, where they will be marked off in a general Map which with a Register will be kept for public inspection—and Registers will also be kept for the same purpose at the Offices of the Government Agents of the Lands for Sale in their respective Provinces.

9.—The Sales will be held when practicable at the Government Agent's Office once a month, after public Notice by Proclamation in the Government Gazette—and care will be taken to prevent the days of Sale in the several Provinces from interfering with each other.

10.—On the day of Sale the Government Agent will specify, in three separate items, the upset price of the Lands, the expense of clearing the boundaries and the Fees for Survey—recoverable under this Minute—and will stipulate that the two latter must be paid in

full by the purchaser on the day of Sale, together with 10 per cent on the amount actually bid for the Land.

11.—The balance of the purchase money must be paid within one month from the day of Sale, and in default of such payment the sale will be considered void, the 10 per cent will be forfeited and the Government will be at liberty to re-sell the Land.

12.—The Colonial Secretary will be entitled to the following Fees for the preparation of the Title Deeds.*

On all grants of Land Sold for a sum not exceeding £5—one shilling.

On all grant of Land Sold for more than £5—four per cent.

But he is in no case to receive more than forty shillings for any one grant.

And the Secretary of the District Court of the District in which the Land granted shall be situate, will be entitled to a fee of five shillings for enrolling the grant.

13.—On the receipt of the purchase money in full and of the Fees allowed by the preceding Rule, the Government Agent will apply to the Colonial Secretary for a grant in Duplicate. One Copy shall be delivered to the purchaser, who shall forthwith be put in possession of the Land, and the other enrolled in the District Court.

14.—The Crown reserves to itself the right of making and constructing such Roads and Bridges as may be necessary for public purposes in all Lands purchased as above, and also to such indigenous timber, stone and other materials, the produce of the Land, as may be required for making and keeping the said Roads and Bridges in repair, and for any other public works. The Crown further reserves to itself all mines of precious metals.

By His Excellency's Command,

Colonial Secretary's Office,
Colombo, 22d November 1845.

P. E. WODENHOUSE,
Actg. Col. Secy.

MINUTE

BY THE GOVERNOR.

HIS EXCELLENCY THE GOVERNOR is pleased to direct that the following rules for the payment and adjustment of Costs attending the Survey of Lands intended to be brought to sale, be substituted for those laid down in the Minute of the 7th October 1844.

The Treasurer will, on his application, furnish the Principal Officer in charge of the Survey Department with the necessary funds to meet the expenses of Survey; and he will debit these sums as Advances, for the settlement of which the Principal Officer in charge of the Survey Department will be responsible.

The recovery of these sums from the purchasers of Land will be made by the Government Agents and remitted to the Principal Officer in charge of the Survey Department, and by him forwarded to the Treasurer in liquidation of the Advances outstanding.

If any Land is not sold within one year from the date of its being advertised for sale, the expense of Survey on account of such Land is to be brought to account as a Charge by the Principal Officer in charge of the Survey Department—in order to which it.

* See Minute of 2d July 1847.

will be necessary in all cases, that proper Vouchers should be obtained for every payment as incurred.

Should any such Land be afterwards sold, the costs of Survey recovered are to be paid by the Principal Officer in charge of the Survey Department to the Treasurer to be accounted for as an Incidental Receipt.

The Principal Officer in charge of the Survey Department will transmit to this Office quarterly a Return of all unsold Lands, the expenses of surveying which shall have been charged as an expenditure—making a note of such as may have been subsequently sold.

He will also furnish the Auditor General with a quarterly Account of all payments made by him out of the Advances received from the Treasurer, and of the recoveries on account—accompanied by a separate Account of the payments finally brought to account, and of the recoveries since made.

These rules are not however to apply to the Advances already made to Government Agents by the Treasurer, which they will settle in terms of the Minute of the 7th October 1844—returning to him any Balance that may be now in their hands.

Colonial Secretary's Office,
Colombo, 24th November 1845.

By His Excellency's Command,
P. E. WOODHOUSE,
Actg. Col. Secy.

RULES TO BE OBSERVED ON APPLICATION FOR LOANS.

1.—Any person desirous of obtaining a loan from the Colombo Savings' Bank must make an application by letter addressed to "The Chairman of the Superintending Committee" in which he is to state the sum required, the nature of the security he intends to offer,—whether immoveable or moveable property, the Title-deeds are to be forwarded at the same time. On superscription to be written "Immediate" when it will forthwith be attended to.

2.—The Chairman of the Committee, on receiving an application for Loan, will forward the same together with the Title-deeds to the Trustees, who if satisfied as to the legality, will cause the property to be appraised, and examine the sureties as to their sufficiency.

3.—On the Trustees acquainting the Committee that they are satisfied with the security tendered, the applicant will be entitled to receive as a loan one-half, and in case he gives two or more securities, two-thirds of the sum at which his property may have been appraised.

4.—The applicant must deposit with the Accountant the appraisers' fees on the sum applied for, at the time of making his application; but should a Loan of less amount than that applied for be sanctioned, the surplus fees will be returned.

5.—Where moveable property is offered to be pledged, the applicant will be informed when and where it is to be produced for the purpose of being appraised.

6.—The fixed allowance of the appraisers to be employed one-half per cent on the amount lent, and where the property to be appraised is situated without the Pettah and Fort of Colombo, then each appraiser is allowed in addition one shilling per mile travelling expenses.

7.—In all cases where the borrower is not subject to, or the property to be mortgaged is situate without the jurisdiction of the Supreme Court, or of the District Court of Colombo, such borrower will be required to execute, in addition to his Bond, a Warrant of Attorney to confess judgment.

LOAN OFFICE.

TREASURER TO GOVERNMENT	} Commissioners.
REGISTRAR OF THE SUPREME COURT	
G. M. PARSONS, Esq. 2001	

RULES.

1st.—Respecting Loans.

Original rules framed in accordance with an order of the Supreme Court, dated 16th July 1821.

1. The titles must be produced, where real property is offered as security.

2. The articles themselves, where gold, silver &c. is offered.

3. The property hypothecated must appear to be equal in value, if real property, to one-third more than the sum required to be borrowed; or, if it consists of gold, silver &c. one-fourth more. But if the property offered for hypothecation by the borrower, fall short of that amount, the property of another person, may be received to make up the deficiency. In such case, the person so contributing must be a party to the bond, which will state the circumstance of the case.

4. Every applicant must, besides the property hypothecated, enter into a bond with two securities for the repayment of the principal sum borrowed, whenever the same shall be demanded, and of the interest as it becomes due.

Order of the Supreme Court dated 21st November 1833.

5. Each of the sureties will be required to give such an account of his property as may satisfy the Board that he is worth the amount of half the sum borrowed, after

payment of all his debts; and should the Board deem it necessary, he shall be required to make affidavit to the truth of his statement.

Original rules as above.

6. If the borrower should be unable to procure persons to become securities for

him, the Board will at its discretion waive this condition on the borrower pledging property to double the value of the sum required.

If either of the securities should not have property to the value of the sum borrowed, others may be added, not exceeding four in all, to make up the deficiency.

Where the securities intend to rely on landed property in procuring themselves worth the sum required, they should bring with them the title by which they hold such landed property, (provided it be not mortgaged) when they attend for the purpose of justifying.

Original rules as above. 7. A certificate, a copy of which will be

given by the Clerk of the Board, must be obtained from the Collector of the District, (Agent of the Province) in which the applicant resides, that neither himself nor either of his securities is a Government Renter or Security for a Government Renter.

Order of Court—21st November 1833. In all cases in which the Board may deem

it necessary, the oath of the parties (principal or security) will be required, in addition to the Collector's certificate, to the effect that he is not a Government Debtor or Renter, or Security for any such persons.

Original rules as above. 8. The property offered for hypothecation must in all cases be valued at the expense of the applicant by appraisers to be appointed by the Board; and the applicant must, if required, deposit with the Clerk of the Board the per-centage, to which the appraisers will be entitled, and which will be settled by the Board.

N.B.—The rate allowed in ordinary instances is $\frac{1}{2}$ per cent on the amount of the Loan.

Order of Supreme Court dated 15th December 1830. 9. The Interest to be paid on all Loans is 7 per cent, which is to be paid

monthly; in default of which parate execution may be taken out for the recovery of the same.

2d Respecting Dividends of Interest.

Order of Supreme Court dated 21st November 1833. 1. The Loan Board will have one head of account with each Court; such account shall include all sums in deposits from that Court whether the same be Suitor's monies, Estate monies, or otherwise; but the Loan Office will only take account of the aggregate sum.

2. The accounts of the Office will be made up, and the interest divided quarterly, commencing from 1st January 1834.

3. Every pound sterling of principal, which has been for one complete quarter available for the purpose of making Loans, shall be entitled to a dividend of the Interest; such quarter is to be calculated from one dividend day to the subsequent dividend day, (i. e.) 1st January, 1st April, 1st July and 1st October.

4. Dividends shall not be calculated of lower fractions than one farthing on a pound sterling of principal, and any sum, the retaining of which would render such calculations necessary, shall be set over till the next dividend day.

5. The funds of the Weeskamer and Boordelkamer shall be kept separate from the accounts of the different Courts—the interest derived therefrom being wholly paid over to Government.

6. At the end of each quarter the Board will audit the accounts of the interest received, and declare the dividend to be allowed; in the first place setting over two-sixth thereof to the use of Government towards the expenses of the establishment, as heretofore.

Government Regulation No. 6 of 1827 Clause 4. 7. The surplus fund which has been accumulated by deductions from interest received in former years and now amounts to

£720 or thereabouts, or about 8 per cent on the capital lent out; and as it is equitable that the Cash in the District Courts, now about to receive the protection of that fund, should contribute towards it, a deduction of one-sixth of the interest received on monies from District Courts shall be made quarterly, until such deduction shall have accumulated to a similar amount per cent on the principal sums lent out on account of those Courts; after which such deduction shall cease, and the whole shall be formed into one general fund to provide for unforeseen losses of principal lent out.

8. After the deductions have been made the residue of interest received shall be divided as declared in the 4th and 5th Rules: and the amount set over to the credit of each Court according to the total sums which they may have in deposit, and entitled to interest under article 3.

N. B.—The average rate of Dividends (eighteen in number) paid over to the use of the Intestate Estates and Suitors since the establishment of the Loan Office in 1824 amounts to six pounds two shillings per cent per annum, but as the rate of interest charged on Loans has been reduced from 9 to 7 per cent it is not expected that future dividends will average more than 5 per cent per annum.

Captain Crofton	Dr. Beatson
T. Craven, Esq.	Mr. J. B. Raux—Secretary and Acting Superintendent.

The Society is supported by voluntary monthly contributions and occasional donations. Its design is to relieve by pensions or otherwise cases, which, upon the personal investigation of the visitors, are considered real objects of charity. Strangers in distress have also received its aid, many of them having had the means afforded them to return to their native country. The circumstance of the society continuing prosperous enables it to meet all claims within the sphere of its operation. The society has now on its list 25 fixed and 5 provisional pensioners.

Sick paupers are admitted and treated in the society's hospital a commodious and ventilated building, with separate wards for the accommodation of patients of different sexes, according to the character of the diseases. The patients are regularly attended by the resident medical attendant, and have also the benefit of the advice of the consulting surgeon. They are directed under the immediate supervision of one of the members of the hospital sub-committee, are clothed at the expense of the society, and are also allowed every

medical comfort the nature of their respective cases requires—medicine is also afforded gratuitously in particular cases to out door patients.

The Committee have lately established at Trincomalee a general dispensary under the auspices of the Friend-in Need society, on the same principle as that of the Colombo General Dispensary and receive a regular supply of medicines from England for its purposes.

The Committee meet for the transaction of business at the Reading Room on the first Monday of every month at 6—30 P. M.

This Society is supported by monthly subscriptions and donations. All deserving objects in Kandy and its vicinity are relieved by the visitors—Medical relief and food are afforded gratuitously in a Hospital belonging to the Society—into which sick laborers from Estates are also admitted.

In consequence of the rapid increase of the Malabar population in the Central Province the demands on the Society for Medical relief have latterly far exceeded the means at their disposal and increased subscriptions are greatly required.

MISSIONS IN THE ISLAND.

PARENT SOCIETY

PROPAGATION OF THE GOSPEL IN FOREIGN PARTS,

INCORPORATED BY THE ROYAL CHARTER A. D. 1701.

The Society for the Propagation of the Gospel in Foreign parts was incorporated by Royal Charter, in the reign of King WILLIAM III., A. D. 1701, for receiving, managing and disposing of such funds as might be contributed for the religious instruction of His Majesty's Christian subjects beyond the seas, for maintaining Clergymen in the British Colonies, Plantations and Factories, and for the general propagation of the Gospel. It has been engaged in its appointed sphere of duty for upwards of 141 years; and during a whole century, it was the only Missionary Society in connexion with the Church of England. In regard to its constitution, it is under the immediate controul of the Bishops of the United Church and is uniformly conducted on Church principles.

The Society has at present in its employment, Missionaries in the four grand divisions of the British Empire, viz., North America, West Indies, East India and Australia, and the whole number on its List amounts to 302, besides 230 Catechists and Schoolmasters; independently of all which its funds are made available for supporting Colleges and building Churches and Schools. It was in 1818 that the Society extended its operations to the East. Here it has more than 32 Missionaries in its service. It has moreover established a College at Calcutta, called BISHOP'S COLLEGE, for the education of an indigenous Clergy, and the diffusion of sound and useful knowledge; and Grammar Schools at Madras for the instruction of the middle and lower classes.

At Cotta there is an Institution called the *Christian Institution*, where a number of Youths, of good promise selected from the other schools, are boarded and educated, with a view to their becoming useful Schoolmasters, Catechists, and Assistant Missionaries. This Institution contains *Nineteen* Youths. The course of study pursued by them comprises Singhalese, English, (including Grammar, Composition, History, and Geography) Latin, Greek, Arithmetic, Algebra, Geometry, and Theology. There is also a Preparatory class, connected with this Institution, containing *Five* Boys.

At Chundicully there is a *Seminary* containing *Twenty-five* Youths, and another at Baddagama, containing *Fifteen* Youths. From these Seminaries, Youths are selected for the *Cotta Christian Institution*.

The Youths in the *Christian Institution* and Preparatory class at Cotta, and in the *Seminaries* at Chundicully and Baddagama, amounting to *sixty-eight* are boarded and educated at the expense of the Society, with the exception of a few who pay a monthly sum towards defraying the expense of their board.

At Kandy and at Nellore there are *Female Boarding Schools*, the former containing *Thirteen*, and the latter *Thirty-three* Girls. The expense of these two Schools is borne, partly by the Society, and partly by Subscriptions and Donations.

The Holy Scriptures, and the Book of Common Prayer, have been translated into the familiar Singhalese, and printed at the Cotta Press besides many elementary School Books, and a large number of Religious books and Tracts, which have been gratuitously circulated among the Natives.

- It is proposed to form a Church Building Society in connection with this Mission, for the purpose of erecting churches in villages connected with the different Stations, where the inhabitants of such villages may request them, and where they themselves come forward with such readiness and liberality to further the object, as shall, in the judgment of the Committee justify them in rendering the desired assistance. To this fund, the contributions of both European and Native Inhabitants are solicited.

BAPTIST MISSION.

This Mission commenced its operations in Colombo in the year 1812, being the first Protestant Mission to Ceylon. It is at present divided into three sections, having a European Missionary at the head of each—Colombo, J. Davies; Kandy, J. Allen, Matura, C. C. Dawson. In these three divisions there are sixteen principal stations, in each of which three public services are held every week and fourteen Sub-stations in each of which one public service is held every week. In addition to these stations one hundred and twenty villages, and Estates are visited about twice a month. In Colombo, and Kandy the Gospel is preached by Missionaries of this Society in the English, Portuguese, Singhalese, and Tamil languages; in Matura, in English, and Singhalese; and in all the other stations in Singhalese exclusively. This Mission has devoted much attention to the education of the Natives, and has at present forty-five day Schools with an attendance of 1230 Scholars, and three Sunday Schools with 85 Scholars. At Colombo it has a boarding School for destitute native girls, who are trained to domestic duties, and taught the rudiments of knowledge in English and Singhalese by Mrs. Davies. There are in this institution at present, twelve girls, who are supported by the special contributions of ladies in Ceylon and in England. At Matura it has an Academy in which

ive Youths are taught, and boarded by Mr. Dawson, with a view to fitting them for teachers, Catechists, and Missionaries. At Kandy has a printing Press employed in printing tracts, School books, &c. for the use of the Mission. This Mission carries on all its operations by voluntary contributions exclusively. SCIENCE, ORDINANCES,

A BRIEF EXPOSITION OF THE PRINCIPLES OF
AGRICULTURAL CHEMISTRY.

BY GEORGE GARDNER, F. L. S.

Superintendent of the Royal Botanic Gardens, Ceylon.

It is only within the last ten years that Agriculture has risen from
 empiricism, and been reduced to something like a Science. This
 is due to Chemistry; and although much still remains to be done,
 the united labours of the Chemist and the practical Agriculturalist
 have shown that the proper path has been entered on, and that the goal
 is not far distant.

Much has lately been written on the subject of Agricultural Che-
 mistry, but mostly in bulky volumes which are not within the reach
 of the farmer, and even when possessed, heavy to wade through from the
 tedious details of experiments on which its principles are estab-
 lished. The present exposition of these principles is purposely freed
 from such details.

For this reason, it is my intention to give as briefly as possible, and in
 language as free from technicalities as is compatible with their ex-
 planation, a sketch of the chemical constitution of plants—of the
 elements of which they are composed, and the sources from which
 these elements are obtained, as it is necessary to have clear notions
 of these points before any one is able to understand the subject of
 agriculture, and the application of manures—two of the most important
 matters connected with agriculture.

It is a startling assertion to make, but one that is not the less
 true, that plants are principally composed of solidified air, modern
 chemists having fully demonstrated this fact. If the composition of
 the atmosphere be examined with care, it will be found that its
 constituents always exist in the same proportions. The principal
 constituents are two gases—oxygen and nitrogen, of which, in
 100 volumes of air, there are 208 volumes of the former to 792 of the
 latter. But besides these it always contains a quantity of watery vapour,
 and a small proportion of carbonic acid gas and ammonia.

Now it is found by analysis that these very atmospheric gases form the
 greater part of the solid structure of plants, the remainder being certain
 earthy particles and ashes.

The carbon which constitutes a large portion of the vegetable ture, is obtained by plants from carbonic acid, and is either derived rectly from the air by the leaves, or absorbed by the roots from ground, watered with rains impregnated with atmospheric carbonic acid, or supplied by decomposed organic matters contained in the soil. However, chiefly from the air that plants derive their carbon, as is sh by the experiment of M. Boussingault, in which pease sown in pure s watered with distilled water, and fed by the air alone, nevertheless fo in this air all the carbon necessary to their developement, and the c fecting of their flowers and fruit. The part which carbon plays in economy of plants is this: Twelve atoms of carbonic acid having at doned its oxygen, the twelve atoms of carbon united with 10 atoms water, form almost the whole of their cellular tissue, woody fibre, starch or gummy substances. Saccharine matters are also produced the same elements, combined in different proportions. Thus 12 at of carbon and 11 atoms of water form Cane Sugar, while grape Sug formed by 12 atoms of carbon and 14 atoms of water. We'll may c claim with Mr. Dumas, "Admirable fecundity, which can fashion the same elements different substances, with the power in addition transmute them into one another, with the least possible expenditure power as often as occasion requires the change."

We all know that the watery vapour contained in our atmosphere ten falls to the earth in the shape of rain. Water is composed gases—oxygen and hydrogen. Now plants have the power of posing water, just as we have seen they do carbonic acid, and is the hydrogen, so that certain compounds may be formed in wh element predominates. The combinations thus formed are n frequent, and therefore not so essentially necessary to their own e as the compounds of carbon and water. They are chiefly volat fatty substances and wax.

Nitrogen or azote, which forms so large a portion of our atmos is also fixed by plants during their lives, deriving it either from t mosphere, or from manures added to the soil. The azote absorb vegetables serves for the production of a concrete fibrinous subs which forms the rudiments of every one of their organs, and also t formation of the liquid albumen dissolved in all the coagulable ju plants. Azote or nitrogen is then a most important element in v bles, and we shall see hereafter that while some plants derive it e entirely from the atmosphere, others obtain it from the earth—a important distinction taken in connection with manures.

Water in great quantities circulates through the tissue of plants d their life, and as this water evaporates from the surface of the e the salts which it held in solution are left behind, and constit ashes of plants. These salts which were derived from the soil, a turned to it again, as soon as decomposition of the vegetable tissue place. But the same kinds of salts are not found to exist in all pla proof that they have the power of selecting those only which are sary to their existence. Thus, for example, wheat and all other ki grain and grasses contain in their composition a large quantity of acid and potass, as well as phosphate of magnesia and ammonia. Luxuriant crops of such plants are never obtained from soils in these salts do not exist either naturally or artificially in the shape nure. Hence it is that we never find abundant crops of grass on

and calcareous soils, which contain but little potass, because one of the salts necessary to its growth is wanting. In such situations, however, we find in the greatest perfection such plants as require the presence of soda; and here again are most important facts in connection with the application of manures.

The quantity of Mineral substances contained in plants is generally in proportion to the activity of vegetation, because it determines the circulation through them of a greater quantity of water, and consequently of Mineral matters which it holds in solution. The amount of those which are soluble necessarily varies at different periods, while, on the contrary, those which are insoluble go on increasing with the growth and of the plants, as is witnessed, for example, in the deposition of silica in the stems of the Cocoa-nut and the Bamboo.

From the above sketch we see that plants incessantly decompose carbonic acid, fixing the carbon and setting free the oxygen with which it is combined,—that they decompose water, keeping the hydrogen and engaging the oxygen; and that they either abstract azote from the air directly, or indirectly from ammoniacal substances in the soil. They, therefore, act the very reverse of animals, the food of which is obtained directly or indirectly from vegetables. Animals constantly produce carbonic acid, water, azote, and oxide of ammonia; so that the one takes from the atmosphere what the other gives to it. A regular balance is kept up between the two great divisions of organic nature. Vegetation reconverts inorganic matter into food proper for animals and thus reverses the process of respiration, secretion, and ultimately decomposition, returning it to the sources from which it was originally derived, to go on again, without loss, through the same round of change.

Enough of these elementary considerations have now been stated, to enable me to be understood on the subject of soils and manures; but, as I offer of course, little more than a brief exposition of general principles, I shall be able to show that the application of modern chemistry to the cultivation of plants is not to be neglected by agriculturists. Chemistry is now, in fact, doing for agriculture what geology has already done for mining, especially coal-mining.

When we first examine among the matters furnished by the earth, those which belong to the mineral kingdom and their influence on vegetation, the influence is of two kinds; one produced by those substances which are soluble in water, remain around the roots mixed with the decayed remains of plants and animals of which that soil called vegetable is composed; the other by those which, dissolved, are introduced into the plant, mixed with its juices. Without entering into long details it will be understood how powerful the first influence is, and how it must vary with the condition of the primitive soil. Argillaceous soil or clay, retains water, and pure sand, which allows water to escape, presents two opposite conditions or extremes in which only very different plants will live; and if we recollect the necessity which the greater part of plants have for water in their interior, and at the same time of the want of air for their roots, we will be able to see that a proper mixture of the two soils, so that a sufficient quantity of water may be retained and a circulation of air allowed, presents the conditions which are most favorable to vegetation. The mineral matters necessary to fix carbonic acid and azote or nitrogen are able in this manner to retain around the

plant a portion which would otherwise be volatilized, and to preserve it as a depôt which it adds to the quantity furnished directly by the air, and to that which the water already holds in solution.

From this then it will be seen that soil in itself only forms the mechanical medium through which plants derive their nourishment; and that the chemical composition of plants is correlative to the substances contained in the soil and the air. The rational theory of manures which we deduce from these facts is that *Those substances which have been abstracted from the soil by plants must be restored to it if the land is to be kept in a permanent state of fertility.*

The primitive soils, as we have seen, are only two the silicious sandy, and the Argillaceous or clayey. Now from what has already been stated it is clear that the first step which ought to be taken by the Agriculturist is to see that his soil is a proper mixture of both; and then to obtain a knowledge of the chemical composition of the plants which it is his intention to cultivate; and lastly to ascertain, also by chemical analysis, the extraneous matters contained in the soil, so that if they which are necessary to the growth of his intended crop are not present they may be applied in the shape of manure. Some soils being more proper for the production of one crop than another, advantage ought to be taken of this to economise manure. Some plants also derive most of their nourishment from the air, while others can only take it from the soil. The first are consequently the most profitable because their production costs nothing. Thus Boussingault found that the Jerusalem Artichoke which is extensively cultivated in Alsace, contained, on analysis, six times the amount of carbon contained in the seed and manure and three times the quantity of azote; whereas wheat contains little more azote than was contained in the seed and manure expended.

MINUTE.

FOR THE CIVIL SERVICE.

1. UNDER instructions from The Right Hon'ble The Secretary of State, His Excellency the Governor is pleased to direct that the following Rules by which it is proposed that the Civil Service of this Colony shall in future be regulated in respect to Classification, Salaries and Pensions, be published for general Information.

2. The Service will be divided into two Branches, to be termed the Senior Branch and the Junior Branch, and the latter will consist of five Classes.

3. A list of the Offices comprised in the several Branches and Classes, and of the Salaries attached to them is annexed to this Minute.*

4. These Salaries will commence from the 1st July 1845, from which date also will be computed the service entitling the newly added Officers to the periodical increase of Salary incident to their respective Classes.

5. The Pensions of the Civil Servants appointed prior to 1832 will be regulated by the Rules hitherto in force, which will remain unaltered.

6. A Civil Servant appointed subsequently to 1832 will be entitled to Pension at the following rates and under the restrictions, founded upon the Provisions of the Act 4 & 5. William 4. Cap. 24, hereinafter specified.

For 15 years service and less than 20 a Pension equal to four twelfths of the Salary of his Office.

For 20 years and less than 25, five twelfths.

For 25 years and less than 30, six twelfths.

For 30 years and less than 35, seven twelfths.

For 35 years and upwards, eighth twelfths.

These rates are to be the maximum rates in respect of each period of Service, and may be subject to diminution.

7. No pension will be granted without the authority of Her Majesty's Government, in order to obtain which Certificates of Service, Age, good Conduct and of the ground of retirement must be submitted to the Secretary of State.

8. No Pension will be granted to any Civil Servant who shall be under fifty-five years of age, unless upon Certificate from the Head of the Department to which he may belong and from two Medical Practitioners, that he is incapable from infirmity of mind or body to discharge the duties of his situation; nor unless he shall have discharged those duties with diligence and fidelity to the satisfaction of the Head of his Department. And in case the Civil Servant claiming such Pension shall be himself the Head of a Department, then such Pension shall not be granted unless he shall have discharged the duties of his situation with diligence and fidelity to the satisfaction of the Governor, by whom the same shall be certified to the Secretary of State.

9. The Pension shall be computed upon the amount of the Salary enjoyed by a Civil Servant at the time of his retirement, provided

* See pages 160 and 161.

he shall have been in the receipt of the same or in the same Branch and Class for at least three years; otherwise the Pension shall be calculated upon the average amount of Salary received by such person for three years next preceding the commencement of such Pension.

10. It will be competent to Her Majesty's Government in cases of peculiar and extraordinary merit, to grant special and higher rates of Pensions than those laid down in the preceding Regulations.

11. No Civil Servant will be held to have an absolute right to compensation for past Services or to any Pension under this Minute, and Her Majesty's Government will retain their power and authority to dismiss any Civil Servant from the Service without compensation.

12. In consideration of the claim to Pension hereby established, an abatement at the rate of five per cent will be made from the Salary of every Civil Servant appointed since 1832, to commence from the 14th February last.

13. The claim of a Civil Servant to Pension will be considered to have commenced from his first permanent appointment to any of the Offices in the List annexed to this Minute.

MINUTE

FOR THE CLERGY AND TEACHERS.

HIS EXCELLENCY THE GOVERNOR is pleased to announce that the Right Hon'ble the Secretary of State has authorised the benefits of the Pension Scheme for the Civil Service of this Colony, laid down in the Minute of the 3d July 1845, to be extended to all the Clergy and Ministers of the Christian Religion in Ceylon receiving stipends from the Public Treasury, and to the Masters of the Superior Schools; with the following modification however in regard to the period at which the claim to Pension should commence.

By the Minute above referred to, the Pension scale in the case of the Civil Servants is fixed to begin at 15 years' service. But as the considerations which led to that regulation do not apply to Clergymen and Schoolmasters, who must necessarily be of mature age before they are appointed, and would enter, immediately on their arrival in the Colony, on the efficient discharge of their respective duties, Her Majesty's Government has decided that any Clergyman or Schoolmaster who may be compelled to retire after Ten years' service, but under Fifteen, shall be entitled, under the same conditions as are laid down for the Civil Service Pensions, to a Pension not exceeding Three-twelfths of his Salary. After 15 years' service, they will follow in all respects the rules laid down in regard to Pensions to the Civil Service.

His Excellency has further to announce that the following Schoolmasters come within the scope of the regulation hereby established

Principal of the Colombo Academy.

Mathematical Teacher of do.

Classical Teacher of do.

Teacher of Drawing and Design of do.

Head Master of the Model School of do.

Rector of the Native Normal Seminary.

Head Master of the Central School of Colombo.

Head Master of the Central and Normal Schools of Galle.

Head Master of the Central and Normal Schools of Kandy.

In consideration of the claim to Pension, hereby established, an abatement at the rate of five per cent will be made from the Salary of every one of the functionaries described in this Minute, to commence from the 1st July last.

By His Excellency's Command.

Colonial Secretary's Office,
Colombo, August 28, 1846.

J. EMERSON TENNENT,
Col. Secretary.

MINUTE

BY THE GOVERNOR.

HIS EXCELLENCY THE GOVERNOR desires to correct an omission in the above Minute of the 28th August, by inserting in the List of those entitled to pension, the Officer holding the appointment of Inspector of Schools.

By His Excellency's Command,

Colonial Secretary's Office,
Colombo, September 19, 1846.

J. EMERSON TENNENT,
Col. Secretary.

MINUTE

FOR THE JUDGES OF THE SUPREME COURT.

HIS EXCELLENCY THE GOVERNOR is pleased to announce that the Right Hon'ble the Secretary of State has authorised the establishment of a Scheme of Pensions for the Judges of the Supreme Court of this Island, under the following regulations.

A Judge who is unable, after 15 years' service as such, to continue efficiently to discharge the duties of his Office, will be entitled to Pension not exceeding one-half of his Salary; such Pension will however be increased in consequence of prolonged service beyond 15 years.

In the event of a Judge being compelled by ill health to retire after a service of 7 years, but less than 15 years, he will be permitted, on producing a Medical Certificate of incapacity to continue in the discharge of his duties, to retire on a Pension not exceeding one-fourth of his Salary.

To a Judge who should retire before completing 7 years' service, no Pension will be granted.

No Judge will be held to have an absolute right to compensation for past services, or to a Pension under this Minute; and no Pension will be granted without the authority of Her Majesty's Government; in order to obtain which, Certificate of service, age and the grounds of retirement will be submitted to the Secretary of State.
